1. The following is an examiner's statement of reasons for allowance: Primarily, the combination of the ceramic semiconductive barium titanate impregnated with a glass, and having a positive temperature coefficient with a relative density of 90% or less is not suggested or disclosed. As applicant's specification discloses, the combination creates the combination of a high withstand voltage with other characteristics, which the Examiner finds to be unexpected, overcoming any general suggestion for the combination. See page 3, lines 20-25, and Tables 1-2 and the discussion thereof in applicant's specification for evidence regarding the noted unexpected results. While low density is disclosed for some ceramics in general as discussed in previous office actions, see Quirk, and the Japanese Office Action submitted 9/21/2004, there is no suggestion for the particular claimed ceramic and relative density. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karl D Easthom whose telephone number is (571) 272-1989. The examiner can normally be reached on M-Th, 5:30AM-4:00PM.
